

AI Engineer / AI Automation Engineer

Sample Job Description

Role Overview

We are seeking a motivated AI Engineer / AI Automation Engineer to design, develop, deploy, and maintain AI-powered applications and intelligent automation solutions using modern machine learning, LLMs, and workflow automation frameworks.

Key Responsibilities

- Build AI applications using Python.
- Develop LLM-based assistants using LangChain/LangGraph, OpenAI APIs, vector databases, and RAG.
- Design AI agents and automation workflows.
- Integrate REST APIs, databases, and third-party services.
- Deploy applications using Docker and cloud platforms.
- Optimize prompts, monitor models, and improve performance.
- Collaborate with product and engineering teams.

Required Skills

Python, SQL, Git, REST APIs, Machine Learning fundamentals, Generative AI, Prompt Engineering, LangChain/LangGraph, Vector Databases (FAISS/Chroma/Pinecone), FastAPI/Flask, Docker, Linux.

Preferred Skills

Cloud (AWS/Azure/GCP), CI/CD, Kubernetes, Airflow, MCP, n8n, Make.com, Zapier, CrewAI, AutoGen, React/Next.js.

Qualifications

Bachelor's degree in Computer Science, AI, IT, or related field. Strong problem-solving skills and hands-on AI projects.

Nice-to-Have Projects

RAG chatbot, AI resume reviewer, document Q&A, workflow automation, AI copilots, fraud detection, predictive analytics.

Career Path

AI Engineer → Senior AI Engineer → AI Solutions Architect / AI Lead.
